Introduction to Stainless Steel Pleasure Tools

Stainless steel sex toys are the ultimate must-haves for your sex toy collection. Yes. You did read that correctly. Stainless. Steel. You need it — I personally count them as my personal favorites.

Stainless steel sex toys are not some torture relics from the dungeons of yore, but are seriously amazing pleasure tools. These toys are heavy (duh), and can add pressure and weight to your sexual play without much manual effort. They can engage the entire clitoral structure (both internal and external), massage the G-spot/ P-spot with newfound intensity, and even ignite the nerve-rich anal opening with a deep sensation that silicone toys just don't have (not that we don't love silicone toys, because we do).

Weight and pressure feel incredible in the body and these toys truly make the most of it.

Stainless steel sex toys are the literal heavyweights of sex toy

exploration. Be prepared to experience sensations like never before.

If you're feeling anxious, curious, or are just looking for some insider tips on how to enjoy your new stainless steel pleasure tools, read on. This guide includes everything you need to know.

XO,

Alicia Sinclair

The Benefits Of Stainless Steel As A Sex Toy Material

We cannot stress enough the importance of using body-safe sex toys when you're engaging in any kind of sexual play. The vulva — vaginal and anal areas are quite absorbent and you don't want to be putting something potentially harmful into either area. You wouldn't eat an apple covered in chemicals, right? The same should be true of sex toys. Anything going inside of your body should be body-safe.

An inherent benefit of using stainless steel sex toys versus other toys made of body-safe materials is that it is both (almost) totally indestructible and is super easy to clean.

If you buy a stainless steel sex toy, you basically have a sex toy for life.

Durable

Easy to Clean

Safe

They don't break down, lose their quality, or break. While high-quality sex toys will last a long time in general, they ain't got nothin' on stainless steel.

If you're going to invest — these toys are a safe bet.

As for cleaning, you can straight up drop a stainless steel toy into a pot of boiling water to disinfect it. You can also plop them onto the top rack of the

dishwasher and call it a day. For being such kinky-looking toys, they're quite low maintenance.

This easy-cleaning can be very helpful if you're using your toys with multiple partners. There is a low chance of any cross contamination or the spreading of STIs. These toys are incredible hygienic.

Keep in mind that while this stainless steel pleasure tool does not have a motor or vibrate some steel sex toys do (like our chromed steel mini vibe collection). If your toy is a metal-plated vibrator from chrome collection, you'll want to clean it with soapy warm water, just like your silicone toys.

Using Stainless Steel Sex Toys For All Your Sexual Play

General tips and tricks before you go on your merry way:

Before we dive into the types of play you can use stainless steel sex toys for, let's start with a few of the foundational tips and tricks that you'll need to keep in mind before you get going. Let's face it, these toys can be a bit intimidating. It's best to come to playtime with general knowledge to ensure a pleasurable (and fun) experience.

Make sure your toy is properly cleaned and dried before any use. Get yourself some lube. Be sure it's a high quality, paraben-free lubricant. (See more on lube in our "care" section below).

Unless you or your partner enjoy pain as part of your sexual diet, remember that gentler is better with these toys. They are heavy, like, you could straight up knock out a home invader with one of these bad boys — so be careful with them.

Partners should always be cognizant of each other. Check in regularly and be sure everything feels good and nothing is painful or uncomfortable.

Be sure you're buying the right toys for the right play. This is especially true for anal play. You want to be sure to use a stainless steel sex toy with a flared base or a dildo that is curved enough in length that it cannot go completely inside the body. You don't want it to get lost inside the body (yes, for real). Examples of anal play safe toys are the Hoop, Swerve, and Contour.

For primarily vaginal use, our Bow, Arch, and Hoop — tools with a larger, smoother top so as not to injure or damage the cervix — are a great place to begin. However, realistically all of

Le Wand's stainless steel toys can be used vaginally. It's all about finding your perfect shape and preference — or even enjoying them all for different occasions.

Lastly, you know how we mentioned weight and pressure in the intro? You might have thought, "Hm. OK. I don't know what that means." Let's break it down. When we refer to weight and pressure, we're also talking about gravity. Yep, exactly what it sounds like: Letting the earth's pull enhance the sex toy on its own. Once inserted, a stainless steel sex toy will pull down on all the good things (aka: nerve endings) without much help. This tidbit can be particularly useful for those who are just beginning their stainless steel adventures and are feeling a bit apprehensive. You don't have to "fuck" anyone with one of these toys (like you might with a silicone dildo). You can simply place it inside the body and see what happens. Enjoy the incredible fullness and pull of the weight.

G-spot Play

For Vaginal Use

Stainless steel sex toys are awesome for vaginal play for two big reasons: The G-spot and an overall feeling of fullness.

To use the toy for G-spot play, lubricate well and insert into the vaginal opening. Tilt the toy up towards the G-spot (found about an inch or two inside the top of the vaginal canal). You can move your pleasure tool around slowly to create a rhythmic, thuddy feeling, or simply tilt it and leave it in place, resting against the back end of the clitoris. A curved toy is optimal for this.

If you're going for a feeling of fullness, you can insert the toy in all the way to the back of the vaginal canal and either leave it in place or move it in and out of the vagina. Check in with your partner (if you're playing with one) to ensure the speed and depth are comfortable. Since the vagina doesn't have a ton of touch-sensitive nerve endings, the pressure of a stainless steel toy can help to stimulate the deep, pressure-sensitive nerve endings.

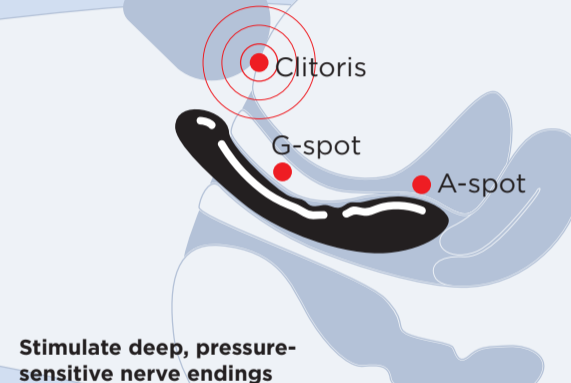

This deep, heavy sensation can feel immensely pleasurable. It can also stimulate the A-spot, the anterior-fornix erogenous

zone, which is located on the anterior wall of the vagina, near the cervix. This spot can also be reached through anal penetration for some clit-owning people.

Don't forget to include external stimulation of the clitoris for a power-packed blended orgasm. Wand vibrators are a great addition for external stimulation — especially because of their broad stimulation and easy maneuvering.

You can get creative with your stainless steel toys, just be sure to check in with your partner to make sure everyone is liking the experimentation.

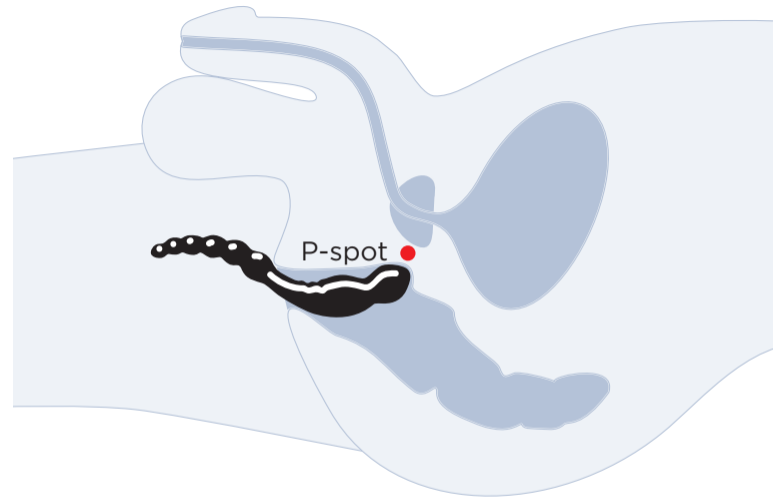

Include external stimulation of the clitoris for a blended orgasm

For Anal Play and P-Spot Stimulation

You don't need to use an enormous, girthy dildo to have good anal-play experiences. So if you're worried about putting a larger metal wand up your bum, you don't have to feel pressured to go big or go home. In fact, the anal opening is where the majority of nerves are located. There's no need for deep penetration, if that's not your thing. In fact, the beaded end of Swerve or the smaller bulb of Hoop are a great place to start if you're just beginning to experiment.

The larger sides of both Swerve and Hoop are excellent for next level play. The teardrop and angled shape of these larger ends are specially designed for the ultimate deep stimulation of this gland. Use a generous amount of lube to both the anal opening and your pleasure tool (we like to recommend silicone or oil-based for anal play). Insert the wand into the anal opening slowly. Be sure the receiver is relaxed and breathing into the sensation. If a person is tensed up, they may end up in pain. No one wants that. Tilt the toy towards your partner's belly button, resting it on the prostate gland* or towards the A-spot in the vaginal canal.

*Some experts believe that P-spot stimulation can increase your orgasm intensity by up to 33 percent.

Temperature play

Just when you thought stainless steel sex toys could do it all, they did one better. Yet another awesome thing about these toys is their ability to adapt to temperature for tantalizing sensation play. Since they're made of metal, they hold onto temperature quite well.

You can stick them in the freezer for a cool sensation over your entire body or warm them up against your body with warm water for a delightfully warm experience.

Be sure to test the temperature of your pleasure tool against your own wrist before touching any other body parts.

This kind of play is super fun for kinky adventures. Have your partner lie on the bed and blindfold them. Use the frozen or warmed up wand to trail circles all over their most sensitive areas. Stainless steel sex toys make for customizable experience. Don't be nervous, these toys won't give you freezer burn. They warm up (or cool down) quite quickly and can really add new dimensions of fun to your experience.

HOW TO CARE FOR YOUR STAINLESS STEEL SEX TOYS

Crafted from pure, medical-grade stainless steel, Le Wand's Stainless Steel Collection of pleasure tools are made to last. This shiny, smooth material not only looks stunning, but its other benefits include being extremely durable and hygienic. Le Wand's stainless steel pleasure tools will not ever corrode or degrade in any way. The nonporous, hypoallergenic material is easy to clean and can be sterilized for safe, hygienic use.

How To Clean A Stainless Steel Sex Toy

As we've mentioned, cleaning these toys are one of the reasons we love them so very much. While the material is exceptionally durable, never use an abrasive cleaner or pad to clean your Le Wand Stainless Steel items. Maintain your stainless steel pleasure tools fresh and clean by washing with soap and water, followed by drying and polishing with the included soft cloth.

To sterilize your items prior to use with a partner or between switching from anal to vaginal play, place your Le Wand toy in boiling water or submerge it in a mild solution of 10% bleach and follow that with a thorough rinse. Or if you prefer an option to sterilize without bleach, and your stainless steel sex toy doesn't

have a motor, you can sterilize it by placing it in boiling water for one minute or by placing in on the top rack of your dishwasher and running it through a full cycle.

If sharing your Le Wand Stainless Steel toy with a partner, you may want to use a condom with those that are inserted. Although stainless steel will not absorb bacteria, improper cleaning after anal insertion may result in contamination if it is inserted into another person or one's own vagina. Wrapping the toy in a condom and changing it in between use with a partner may serve as an alternate option to sterilization.

Best Lube For Stainless Steel Sex Toys

A well-lubricated stainless steel toy glides against the skin with little to no resistance, allowing it to facilitate pleasurable penetration. One of the many benefits of stainless steel is that it is compatible with any type of lubricant. Other toys come with rules such as: Silicone toys can't be used with silicone lubricant, etc. You can use oil-based, silicone or water-based lube. It's totally up to you. Like we said, low-maintenance.

How To Store Your Toys

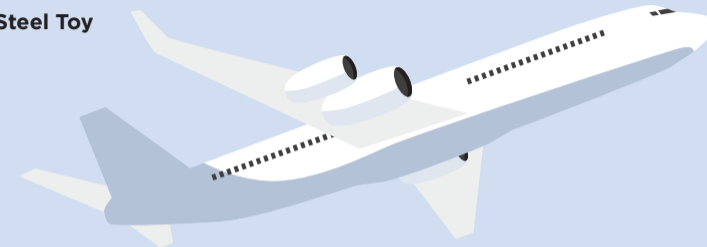

Be sure you're keeping your toys in a cool, dry place. You want to be sure they are fully cleaned and dry before putting them away in the included travel case. Your bedside table is totally fine for storage, but if you're a person who prefers super-sanitary, organized conditions you might want to get some storage containers. Clear plastic shoe organizer bins are perfect for storing intimate products under your bed.

How To Travel With A Stainless Steel Toy

To prep a stainless steel toy for travel, simply place it in the padded storage bag. This way it can be taken with you without the threat of it scuffing or gathering bacteria while getting from point A to point B.

The obvious issue with a stainless steel sex toy? They are heavy. This makes traveling with them a bit on the tricky side. If possible, stick them in a carry on or backpack to avoid an overweight suitcase. Now, you might be thinking: *How in the hell am I going to get this past TSA?*

While we personally think telling a TSA agent that the metal object they have pulled from your backpack is a dildo is fine (and honestly, hilarious as hell), this approach might not be for everyone. If by some chance TSA does decide they need to take a look at your toy, do what people have been doing with sex toys since the vibrator went mainstream in the 50s: Call it a back massager and move on with your day.

LE WAND COLLECTIONS

Le Wand Stainless Steel Double-Sided Pleasure Tool

- Stainless steel toys are prized for their hardness, weight, and hygiene.
- They can be used with all types of lubricant.
- Try cooling them down or warming them up with water for temperature play.
- Clean with soap and water, in the dishwasher, or boil them for 3 to 4 minutes to fully disinfect.
